

Use the following resources to complete the assignment:

- [git - Documentation](#)
- [git - the simple guide](#)
- [GitHub Guides](#)

### **Create/Sign in to GitHub account**

If you don't already have one, create a GitHub account. As a student you can get lots of free stuff (like \$50 toward Digital Ocean server time) by getting the [GitHub Education Pack](#).

### **Create a repository for your capstone project on GitHub.**

#### **Follow "git - the simple guide" to complete the following workflow:**

1. If you are using your own machine, install git. The student machine already has it.
2. Clone your repository locally
3. Create a file called "first.txt" with the text "github is awesome" in it.
4. Add the file to the index
5. Commit the changes with the message: "git is awesome"
6. Push your commit to GitHub
7. Login to GitHub, browse to your repository, and click on "commits" to view your commits.
8. Take a screenshot of the "commits" screen and save it as a PNG.

Online text: Enter the URL of your github repository.

File submissions: Upload the PNG file for the screenshot of your commits.
