Aubry Anne DeReuil is this week’s student of the week. Aubry joined the academy in the spring of 2011. She is a member of the geology research cluster working with Dr. Brian Zimmer and she is currently seeking a degree in Quantitative Geoscience.

Aubry is from Pensacola, Florida and graduated from Pensacola Catholic High School in 2007. Her favorite subjects are geology and chemistry. Aubry enjoys rock climbing, learning, observing and making art, cooking and eating, studying, and reading fiction.

Aubry’s favorite memory from STEP was learning to use the SEM to look at echinoderms the size of a pinhead and presenting at the 2011 Student Research Day. When asked on how the academy has provided her with a better learning experience, Aubry stated, “The Academy opened up the world of geology for me in a way that was much greater than what I could experience in my regular courses. Doing research lets me become a part of that world.” She plans to further her career by attending graduate school to study geochemistry.

WEEK OF 9/3/11 – 9/10/11
