Andrew Zeidell is this week’s student of the week. Andrew joined the academy in the Fall of 2011. He is in the Physics research cluster working with Dr. Conrad and he is currently seeking a degree in Applied Physics.

Andrew is from Northport, New York but grew up in Bakersfield, NC and graduated from Mitchell High School in 2005. His favorite subject is Mathematics and he enjoys hiking, reading, ceramics, and playing classical guitar.

His most memorable moment from being a student in the Academy is just having the chance to collaborate with his peers and make learning a group effort. Every week he looks forward to study groups where scholars can each encourage each other to learn to their fullest extent. When asked to provide a quote on his experience in the Academy, Andrew quoted Isaac Asimov: “There is a single light of science, and to brighten it anywhere is to brighten it everywhere.” Andrew plans on continuing his education to study Physics with a concentration in Electrical and Electronics Engineering; focusing on robotics. Another dream of his is to travel the world, making sure to stop in Belgrade, Serbia to see a museum dedicated to Nikola Tesla.

WEEK OF 3/25/12 – 3/31/12
