

PHOENIX

File Syncing Done Right

Thom Dickson

WHEN IT COMES TO YOUR PERSONAL DATA,

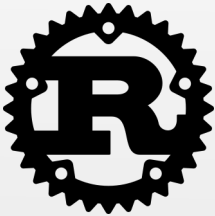

DON'T SETTLE

Rethink the Transfer Protocol

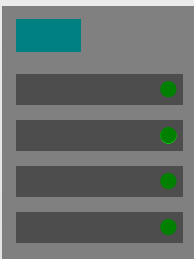

Phoenix uses a binary protocol so space isn't wasted on text encoding.

Modern Technology

Phoenix is build with modern tech such as the Rust programming language and the Noise Protocol to create a blazing fast and secure application.

Efficient Storage Back-end

The backend database uses de-duplication to efficiently store your files without wasting server space on duplicated data.
