## Tentative Calendar for Fall 2023 WRC 1010

Some items have strict deadlines, including debriefs, exams, and the final project components. Many labs are mostly completed during the Monday class—typically, you should submit a PDF for completion credit by Tuesday in the ASULearn assignment but if you weren't able to succeed, you can typically resubmit by Thursday at the latest. Practice quizzes are repeatable until the listed deadline. However, if you weren't able to succeed by that deadline then a second chance will appear for you and stay open until closer to the relevant exam, but the checkmark is easier to obtain when it is originally due (70% instead of 90%). All other activities are those you should attempt for completion by the listed due date—some may have strict deadlines while others are open until closer to the corresponding exam.

	Mon	Between Classes	Tues	Between Classes	Thur	Between Classes

## Statement on Student Engagement with Courses

In its mission statement, Appalachian State University aims at "providing undergraduate students a rigorous liberal education that emphasizes transferable skills and preparation for professional careers" as well as "maintaining a faculty whose members serve as excellent teachers and scholarly mentors for their students." Such rigor means that the foremost activity of Appalachian students is an intense engagement with their courses. In practical terms, students should expect to spend two to three hours of studying for every hour of class time. Hence, a fifteen-hour academic load might reasonably require between 30 and 45 hours per week of out-of-class work.

practice with instantaneous feedback from me, repeatable **Instantaneous Feedback** opens after you **Check** a response so you can retake it. For a box, **hover for feedback**

If \$1000 is deposited into an account paying 5 percent interest in one year, how much interest is earned?

In finance we will round to dollars and cents, so always enter your final response exactly as a number with 2 decimals, like 1234.00 or 1234.56.

3.14 ✖ dollars

Check

If \$1000 is deposited into an account paying 5 percent interest in one year, how much interest is earned?

In finance we will round to dollars and cents, so always enter your final response exactly as a number with 2 decimals, like 1234.00 or 1234.56.

3.14 ✖ dollars

**Hover over box to see my feedback and suggestions.  
Then input new answer and Check again!**

Incorrect  
multiply the deposit by .05,  
since  $5\% = .05$

Use my feedback to help! Check responses until correct.

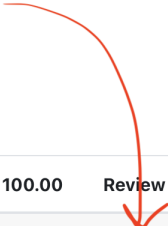

Re-attempt quiz

Grading method: Highest grade

Grade to pass: 70.00 out of 100.00

## Summary of your previous attempts

Attempt	State	Points / 31.00	Grade / 100.00	Review
1	Finished Submitted Saturday, June 10, 2023, 9:23 AM	18.90	60.97	<a href="#">Review</a>

What **percent** of 80 is 66?  **×** %

Incorrect

almost there-convert this to a **percentage**

The correct answer is: 82.5

of typically means multiply in real-life contexts of algebra

What is 25% of 188? convert the **percentage** of 25% to a decimal .25 and then multiply by 188

16% of what number is 35? asks for a number  $x$  so that  $.16x=35$  so divide both sides by .16

What **percent** of 80 is 66? asks for a **percentage**  $x$  so that  $x80=65$ , so divide by 80 and then write as a **percent**

**general feedback**

# %

---

Percent means out of 100, so 5% is  $\frac{5}{100} = .05$ , i.e. move the decimal point over to the left 2 places. To convert a number like .05 back to a percent, do the reverse and move 2 places to the right so .05 becomes 5%. Fractions that are multiples of  $\frac{1}{100}$  were common in taxation and commerce long before the decimal system. The decimal system's conversion came much later!

OK

practice with instantaneous feedback from me, repeatable **Instantaneous Feedback** opens after you **Check** a response so you can retake it. For a box, **hover for feedback**

## CHAPTER TEN

### Deciding Wisely: *Applications of Rigorous Thinking*

*Few people think more than two or three times a year. I have made an ill reputation for myself by thinking once or twice a week.*

GEORGE BERNARD SHAW

Life is one decision after another. We make decisions every waking moment whom to date, whom to marry, whether to eat dessert tonight, what to think & wear, whom to vote for, whether to use correct grammar, what college to attend, investments to make, what car to buy, what medicines to take, how much insurance, whether to hold 'em or fold 'em, whether to buy a lottery ticket or study. These alter a moment or an entire life.

Each realm of decision making contains its own surprises, and sometimes the surprises are discouraging. For example, consider the seemingly simple task of determining the candidate most preferred by voters. Sounds simple enough—just count the ballots. Surprise: We'll see that the whole notion of "most preferred candidate" is essentially meaningless. On the encouraging side, we'll see that we can allocate scarce resources in ways that leave everyone satisfied. In fact, we will show that a highly desirable cake can be cut into three pieces so that three greedy and hungry claimants definitely all feel that they have the best piece. We can productively view insurance decisions as games of chance not much different from roulette. And money matters present issues that range from chaotic to inevitable. When we throw in the risks of life and death involved in issues of medicine and health, the world of decisions takes on an immediacy and importance that encourages us to give math a chance.

With all these decisions to be made—public and private, large and small—improving our chances of making good decisions is crucial. The strategies of insight that have worked over and over in mathematics are equally potent when applied to making decisions. These strategies include understanding simple cases deeply, isolating essential elements from a complex situation, and describing a mathematical model that captures salient features of the decision situation. We now embark on an excursion into the world of thoughtful decision making.

*my personalized feedback*

Here is a partial sample exam so that you can have some practice with some diverse formatting and style of questions. The actual test will differ and may be longer. See also the study guide, which has sample responses to questions at the end.

Exam 1 Math 1010 - NAME \_\_\_\_\_

Partial credit will be granted so do continue on with a problem even if you know that one part is wrong. If part b) depends on part a), full credit can still be obtained for b) by showing the correct process.

"Set up a formula with numbers substituted in for the variables" means that you should set up something similar to  $100(1 + .049)^{10}$  (using the appropriate formula and numbers)

"Show work" means that you should show what numbers you plugged in to formulas to get an answer (i.e.  $3^2 - 1 = 7$ ) but there is no need to explain in words.

**PROBLEM 1:** Yusuf is taking out a loan to buy an apartment. The interest rate was 6.75% compounded monthly for 30 years. The loan amount was \$84212.00.

- Set up a formula with numbers substituted in for the variables in order to determine the required monthly loan payment.
- Solve for an answer for the required monthly payment.
- How much interest (\$) does he pay in total over the life of the loan? Show work.
- Does your answer in c) make sense? If yes, just say so. If not, explain why not.
- What is the interest (\$) for the first month? Show work.
- Why isn't the answer in part c) equal to the answer in part e) divided by 360, i.e. the average interest (where I obtained 360 by the number of months)?

Instead of paying the required monthly payment of \$466.20 from part b), beginning with the first payment, Yusuf decides to pay \$400 each month. On Excel, we see the following:

Month #	Monthly Payment	Monthly Interest(I)	Principle Paid	Loan Balance
277	\$600.00	\$6.01	\$593.99	\$473.73
278	\$600.00	\$2.66	\$597.34	(\$123.61)

- Use this Excel to determine how much he pays in total now. Show work.
- How much total interest (\$) does he pay over the life of the loan now? Show work.

This Semester in Review final project video by Dottie Benninghofen and Stella Hopkins

- Effective Class Engagement 5%
- Effective ASULearn Engagement 50%  
lowest 3 dropped
- Exam Portfolio 30%  
can correct 1 of 3 exams to replace the grade
- Final Project 15%

# Monday Labs

## ● Bring the lab with you. I'm here to help!

2D universes

Dr. Sarah's 1010: Introduction to Mathematics  
Geometry of the Earth and Universe

How we measure and view the world around us and decide what is the nature of reality.

goals:

- Develop problem solving and analysis skills in recognizing patterns and similarities in geometric representations to work towards becoming logical, flexible, critical thinkers and problem solvers.
- Compare and contrast small-scale and large-scale mathematical regions.
- Communicate geometric information in written documents.

### Living in a 2D World

1. How could a 2D Marge Simpson and 2D Lisa Simpson still “pass” each other if they live on an infinite 2D plane, even though they can't walk behind each other (since their surface has no depth and they would bump into each other)?
  
2. In order to explain a cube to 2D folks and to Homer Simpson, who is trapped in the “third” dimension, a (supposedly) 2D Professor Frink says:  
**Frink:** – but suppose we extend the square beyond the two dimensions of our universe (along the hypothetical z-axis, there).  
**Everyone:** [gasps]  
**Frink:** This forms a three-dimensional object known as a “cube”, or a “Frinkahedron” in honor of its discoverer, n'hey, n'hey. [Taken from text transcript of 3D Homer segment and Did You Notice? by James A. Cherry]

Assume the shaded portion on  is the square that is referenced above. Label a z-axis, out of the base, on this “Frinkahedron.”

Image: Davide P. Cervone <http://www.math.union.edu/~dpvc/math/4d/welcome.html>

# Tues/Thur Questions handout

## 1010 Personal Finance and Beyond Algebra T/Th Questions

Here are portions of questions from class to help you with your notes or later practice. The wording and ordering may change and we may not have time to cover all of them. Here we actively practice concepts, computational strategies, critical & creative thinking, and communication. Making mistakes is integral to the learning process and enriches our understanding as we extend content and clear up misconceptions.

- **Think** about a possible answer(s) on your own.
- **Pair up:** discuss your thoughts in a group. We may reorganize groups at times.
- Prepare to **share** from your group's discussion. This may take the form of an assertion, question, definition, example, or other connection. It could be something you tried and rejected.
- May be a lag at times—use this to **review** related concepts and examples, and **add** to your notes, or get to know your neighbors.

Appalachian's General Education Program prepares students to employ various modes of communication. Successful communicators interact effectively with people of both similar and different experiences and values and in this class you will practice oral and written communication during class by interacting with various peers and me.

### lump earnings

- Suppose we deposit \$1000 in a savings account that pays 5% interest compounded monthly for 142 years—how much will we have in total savings?
- Which is better interest in this scenario, compounding annually, compounding monthly, or are they the same?
- Which do you think best explains why it does make sense to charge interest?
- Which do you think is most compelling of why it might not make sense to charge interest?
- If you were going to design an independent, self-sustaining, space mission, who travel far away to continually explore the geometry of the universe, would you charge interest within that community

## Tues/Thur Class

- bring the T/Th Questions handout, calculator, and (if possible) a computer, tablet or phone with you to access webpages
- active learning and guided discovery that is review or extension
- small group—help each other—and whole class activities  
I'm here to help!
- individual and group assessments
