

## *Project 3: Recent Media (last 12 months) Critiques*

- Collecting Data and the Role of Chance and Probability, Boxplots, Predictors [could be all in 1 source or up to 3].
- $\geq 1$  source from ASU library current periodicals or library database [specify which]
- Connections to both books in each portion, including pages
- Critiques (positives and negatives)
- List source but no need to print articles/media

The article never mentions where the studies took place. Were they in private colleges as well as public? Were they in well-respected schools or any school they could find? What kind of majors did the students have? What were the ages of the students? What were their family lives like? All these important questions and possible underlying factors need to be answered before we can fully trust these predictors. This is very similar to the case of Roosevelt versus Landon, as it may not include a large or diverse enough sample to accurately predict success. (How Do... p. 133, HoM...)
