What happened in 1918? median: 1.56. mean: 1.48.

Here is Nielsen ratings (roughly represent the percentage of households tuned in). Use the boxplots to award "best network"

◆□▶ ◆□▶ ▲□▶ ▲□▶ □ のQ@

- c) NBC (bottom)
- d) There should be more than 1 winner
- e) other

Here is Nielsen ratings (roughly represent the percentage of households tuned in). Use the boxplots to award "best network"

- b) CBS (middle)
- c) NBC (bottom)
- d) There should be more than 1 winner
- e) other

Discuss how to spin the statistics positively for each network: Here's good news, we are the best network because... In one of them, it may be challenging to say something positive but truthful, but think creatively!

Which is true for CBS, the middle boxplot?

- a) The mean is probably higher than the median
- b) The mean is probably lower than the median
- c) The mean is probably about the same as the median

- collecting data: reproducibility, consensus, and random sampling if possible
- presenting data: entire data set versus numerical or visual snapshots of it
- expected value: weighted probabilities for decisions
- mean and median: central tendencies
- box plots: comparisons
- regressions: correlations
- confidence intervals: uncertainty in even the best polls

all can be subject to bias and distortion, and are definitely subject to probability and random variations

Post-election view: Should never, ever trust polls again, as they proved Secretary of State Clinton almost certain to win Really: Polls showed an uncertain and volatile race with Clinton as a modest favorite and President Trump with a chance

- myth there was a catastrophic failure for the polls. Trump outperformed his national polls by only 1 to 2 percentage points. He beat his polls by only 2 to 3 percentage points in the average swing state.
- there were individual pollsters that had some explaining to do, especially in Michigan, Wisconsin and Pennsylvania, where Trump beat his polls by a larger amount.

Post-election view: Should never, ever trust polls again, as they proved Secretary of State Clinton almost certain to win Really: Polls showed an uncertain and volatile race with Clinton as a modest favorite and President Trump with a chance

- myth there was a catastrophic failure for the polls. Trump outperformed his national polls by only 1 to 2 percentage points. He beat his polls by only 2 to 3 percentage points in the average swing state.
- there were individual pollsters that had some explaining to do, especially in Michigan, Wisconsin and Pennsylvania, where Trump beat his polls by a larger amount.
- not some sort of massive outlier; the polls were pretty much as accurate as they'd been, on average, since 1968
- FiveThirtyEight: Trump a 3 in 10 chance of winning the Electoral College. Others: 1 in 100

Confidence Levels

If there is little to no bias and truly a random sample, then x% confidence interval is a numerical interval generated by a procedure that x times out of 100 will produce an interval that contains the true value for the entire population.

SURVEY METHODS

The results of this Wells Fargo/Callup Investor and Reitrement Optimism Index survey are based on a Gallup Panel web study completed by 1.059 US, investors, aged 18 and older, Aug. 13-20, 2018. The Gallup Panel is a probability-based longitudinal panel of US, adults. Gallup recruits panelists using random-digit-dial phone Interviews that cover landlines and cellphones, as well as using address-based sampling methods. The Gallup Panel is not an opt-in panel.

The sample for this study was weighted to be demographically representative of the US. adult population, using the most recent Current Population Survey figures. For results based on this sample, the margin of sampling error is ±5 percentage points at the 95% confidence level. Margins of error are higher for subsamples. In addition to sampling error, question wording and practical difficulties in conducting surveys can introduce error or basis into the findings of public opinion polls.

A survey reports a margin of error of 3% at the 95% confidence interval. Approximately how many people were surveyed? $\frac{1}{\sqrt{n}} = .03$ so $\frac{1}{.03} = \sqrt{n}$ and so $(\frac{1}{.03})^2 = n$

Gallup Polls

SURVEY METHODS

Results for this Gallup World poll are based on an aggregation of telephone and in person interviews conducted with 5,011 individuals aged 15 or older residing in Algeria, Libya, Egypt, Morocco and Tunisia in 2016 and 5,030 in 2017. The interviews were conducted with between 1,000 and 1,016 individuals in each country, each year. For results based on an aggregation of adults residing in these countries, the margin of sampling error is ±2 percentage points at the 95% confidence level. All reported margins of sampling error include computed design effects for weighting.

We check for overlaps in the intervals in order to evaluate the statistical validity of headlines and statements in polls

LANDON, 1,293,669; ROOSEVELT, 972,897 Final Returns in The Digest's Poll of Ten Million Voters

Well, the great battle of the ballots in the lican National Committee purchased Tur-Poll of ten million voters, scattered throughout the forty-eight States of the Union, is now finished, and in the table below we record the figures received up to the hour of going to press.

from more than one in every five voters polled in our country-they are neither weighted, adjusted nor interpreted.

polls have we received so many different correct? In answer to this question we will varieties of criticism-praise from many; condemnation from many others-and yet it has been just of the same type that has in answer to his challenge to us to wager in all these years.

A telegram from a newspaper in California asks: "Is it true that Mr. Hearst has purchased The LITERARY DIGEST?" A telephone message only the day before these lines were written: "Has the Renah-

LITERARY DIGEST?" And all types and varieties, including: "Have the Jews nurchased THE LITERARY DIGEST?" "Is the Pope of (hioo, is now finished, and in the table THE LITEMANY DIGEST? "Is the Pope of solow we record the figures received up to he hour of going to press. These figures are exactly as received inom more than one in every five voters recent days are but repetitions of what we eighted, adjusted nor interpreted. Never before in an experience covering the state of the state

more than a quarter of a century in taking Problem-Now, are the figures in this Poll simply refer to a telegram we sent to a young man in Massachusetts the other day come to us every time a Poll has been taken 8100,000 on the accuracy of our Poll. We wired him as follows:

"For nearly a quarter century, we have been taking Polls of the voters in the fortyeight States, and especially in Presidential years, and we have always merely mailed the ballots, counted and recorded those

returned and let the people of the Nation draw their conclusions as to our accuracy So far, we have been right in every Poll Will we be right in the current Poll? That, as Mrs. Roosevelt said concerning the Presi dent's reelection, is in the 'lap of the gods.

"We never make any claims before elcotion but we respectfully refer you to the opinion of one of the most quoted citizens to-day, the Hon. James A. Farley, Chairman of the Democratic National Committee. This is what Mr. Farley said October 14, 1992;

"'Any same person can not escape the implication of such a gigantic sampling of popular opinion as is embraced in THE LIT-ERARY DIGEST straw vote. I consider this conclusive evidence as to the desire of the people of this country for a change in the National Government. The LITERARY Digest poll is an achievement of no little magnitude. It is a Poll fairly and cor-rectly conducted.""

In studying the table of the voters from
