9.2 Geometric Series versus 9.3 p-Series ratio between any two consecutive terms is constant. sum of the first *n* terms: $\frac{a(1-x^n)}{1-x}$. Careful of # terms and starting index. $\lim_{n \to \infty} \frac{a(1-x^n)}{1-x} = \frac{a}{1-x}$ if |x| < 1• $\sum_{\substack{n=1\\ \infty}}^{\infty} \frac{1}{n^p} \text{ converges if } p > 1 \text{ and diverges if } p \le 1.$ $\sum_{\substack{n=1\\ \infty}}^{\infty} \left(\frac{1}{2}\right)^n = \frac{1}{2} + \frac{1}{4} + \frac{1}{8}... \text{ geo series, } |x| = .5 < 1 \text{ conv to } \frac{.5}{1 - .5}$ $\sum_{n=1}^{\infty} \frac{1}{n^2} = 1 + \frac{1}{4} + \frac{1}{9} \dots p \text{ series: } p = 2 > 1 \text{ conv by integral test:}$ terms dec +: $\int_{1}^{\infty} \frac{1}{x^2} dx = \lim_{b \to \infty} \int_{1}^{b} x^{-2} dx = \lim_{b \to \infty} \frac{x^{-1}}{-1} \bigg|_{0}^{b} = 0 - -1$ $1 \le \sum_{n=1}^{\infty} \frac{1}{n^2} \le 1 + \text{ first term} = 1 + \frac{1}{1^2} = 1 + \frac{1}{1^2}$

Sequence versus Series

Dr. Sarah

Math 1120: Calculus and Analytic Geometry II

Solution Is this a geometric series? Just no *Geometric Series*: $\sum_{i=0}^{\infty} ax^i$ where *x* is the common ratio and *a* is a constant. $\sum_{i=0}^{n} ax^i = \frac{a(1-x^{n+1})}{1-x}$. $\sum_{i=0}^{\infty} ax^i = \frac{a}{1-x}$ provided |x| < 1.

- Can we apply the Terms not Going to 0? yes no *Terms not Going to 0*: For $\sum a_n$, if the $\lim_{n \to \infty} a_n \neq 0$, then the infinite series does not converge.
- So Are the terms decreasing and positive eventually, and if so is this an integral we can do? yes no *Integral Test*: For $\sum a_n$, if the terms are decreasing and $a_n > 0$, then the series behaves the same way as $\int_a^{\infty} a_n dn$, & $\int_a^{\infty} f(x) dx \le \sum a_n \le 1$ st term $+ \int_a^{\infty} f(x) dx$.
