

- Stand up and share your preferred name(s) and majors and minors.
- Share your idea for the final project. If unsure, can present more than one idea.
- Share a favorite topic from class and/or what you might do over break (other than sleep!) that you'd be excited to tell us about if we were meeting again next semester.

extension of course content	extend class content in some creative way by presenting material orally and in writing. You could explain new material, examine connections to your interests, describe historical connections, code, or make other new connections
alphabetized bullet point list of related class topics	present an alphabetized bullet point list of topics we covered that relate to your topic orally and in writing—at least one topic from our class is on it
peer who needs a refresher	explain linear algebra we covered to a peer who needs a refresher using the language of our class
depth of linear algebra connections	present rich linear algebra connections orally and in writing with correct mathematics, connecting to the language of our class when possible. depth can be achieved by reviewing related linear algebra we already covered and connecting it to your extension, if the extension is a program you create, history, real-life applications, etc., or it can be achieved with the linear algebra extensions themselves, if the topic is one we haven't covered
personalization and reflection on your process, tools or content	personalize your explanation, like reflecting on your favorite aspects or the reason you selected your topic. if applicable, describe what you did and how, explaining any research conducted, papers read, or coding and specifying tools like Maple or LaTeX for professional formatting or image creation, if used
if applicable, professional scholarly reference list with author names, end of slides	if applicable, cite credible, relevant sources and/or evidence that are situated within the context and purpose of the presentation and are listed professionally and cited appropriately, including authors
if applicable, cite image references	images are referenced by their original source but do not need authors. Place these and any other citations at the end of your slides
overall writing and speaking	writing and speaking is clear, well organized, and professionally presented (it is ok to have some imperfect flow in your speech)
own words/self-creation	create products yourself and explain in your own words
share final project ideas during class	on our last day together before finals, briefly present your name and final project plans to classmates and hear theirs. If you are unsure, you can present more than one idea and decide later
forum post	post a message in the final project forum containing your preferred name(s), the final project title, and a link to your video that we can access unless you work with a partner in which case one of you posts that and the other posts a message naming your partner
4 peer reviews	in-depth peer review of 4 classmates' presentations with topics different than yours (if possible) and detailing strengths, suggestions and what you learned (see below for questions)
self-reflection	in-depth self-reflection (see below for questions)
