Propositions, Assumptions and Applications

Proof Considerations: I can write rigorous proofs in geometry, identify underlying assumptions, and understand limitations and applications.

Applications of Congruence and Similarity

- every isometry in the plane is a product of at most three reflections (via SSS)
- two isometries which agree on three non-collinear points are the same on all points (via SSS)
- For triangles, SSS and more are lists of possible design choices in Euclidean geometry of the plane.
- More generally, in other geometries, or for more points, like for CAD or CAGD programming, when are design choices complete or when do we need more choices?

Burden of Proof: Is the defendant a square?

Dr. Sarah Math 3610: Introduction to Geometry

Euclidean Quadrilateral Design Choices

Investigate similarity in quadrilaterals (no internet searches). Look for counterexamples of quadrilaterals and write them on the board as you find them (e.g. SSSS with a counterexample) You may use IGS. Then consider what is the smallest amount of information you need to determine that quadrilaterals are similar?

SSAA and SSASA?

個 とく ヨ とく ヨ とう

Assume two quadrilaterals *ABCD* and *A'B'C'D'* satisfy $\frac{\overline{AB}}{\overline{A'B'}} \cong \frac{\overline{BC}}{\overline{B'C'}}$ (i.e. SS similarity) and three pairs of the angles are congruent.

Assume two quadrilaterals *ABCD* and *A'B'C'D'* satisfy $\frac{\overline{AB}}{\overline{A'B'}} \cong \frac{\overline{BC}}{\overline{B'C'}}$ (i.e. SS similarity) and three pairs of the angles are congruent.

• Must $\angle ABC \cong \angle A'B'C'$? Why or why not?

Assume two quadrilaterals *ABCD* and *A'B'C'D'* satisfy $\frac{\overline{AB}}{\overline{A'B'}} \cong \frac{\overline{BC}}{\overline{B'C'}}$ (i.e. SS similarity) and three pairs of the angles are congruent.

- Must $\angle ABC \cong \angle A'B'C'$? Why or why not?
- What, if anything can we say about △ABC and △A'B'C', and why?

Assume two quadrilaterals *ABCD* and *A'B'C'D'* satisfy $\frac{\overline{AB}}{\overline{A'B'}} \cong \frac{\overline{BC}}{\overline{B'C'}}$ (i.e. SS similarity) and three pairs of the angles are congruent.

- Must $\angle ABC \cong \angle A'B'C'$? Why or why not?
- What, if anything can we say about △ABC and △A'B'C', and why?
- What, if anything can we say about ∠CAD ≅ ∠C'A'D', and why?
- How about $\triangle ACD$ and $\triangle A'C'D'$, and why?
- How about ABCD and A'B'C'D', and why?
