### Instructions for submission ▾

For your first draft, people who submit by the deadline will also participate in double-anonymous peer review, the cornerstone of equitable peer review in publishing. No exceptions to the due dates can be accommodated in ASULearn's workshop mode. The idea of double-anonymous peer review is that the work and the reviews should stand on their own, independent of prior reputations and hopefully reducing or eliminating implicit biases.

In anonymous reviewing, people don't know whose work they are reviewing and authors don't know who reviewed their work. I have tried to set this up on my end. If you would like to take advantage of double-anonymous reviewing then please make sure that you don't have any identifying information in your submission, like your name in your PDF or in your file name!

### Assessment

Grade: 0 of 0

#### Assessment form ▾

#### Aspect 1

Research, analyze and reflect on discipline-specific materials. The idea is to incorporate different levels and areas as appropriate to investigate mathematical knowledge from MAT 4140 in order to recognize the development of mathematical ideas from the past and the breadth of mathematics covered in MAT 4140, its impact on mathematical study, and its relation to the global mathematical community.

Comment on this rubric item. Try to provide at least one area where the author can improve their work and at least one strength, so that they can receive constructive feedback that helps them revise. Be honest in a professional manner to point out problematic areas but at the same time try to be kind and gracious in your comments and tone whenever possible. Focus on ideas and constructive suggestions toward positive solutions rather than implications about the author.

Comment for Aspect 1

great job on the research itself as I saw many references. However, the analysis and reflection could be improved by personalizing more and

- It is easy to forget about it. Block a regular time in your schedule for homework.
- Make sure the topic you choose for the course project is something you are interested in. If it isn't, you can change it at the end, but it is better to choose something good from the beginning.
- I had fun with the readings and activities. The reflections are as interesting as you make them.
- Remember that some weeks will have less homework than others. Spend any spare time on the course project so that your last weeks of class are not too crazy. The workload overall was fine.
- Dr. Sarah has set up the course project to be completed in steps to help you. Take advantage of these and Dr. Sarah's help. I hadn't realized that I could bring coding problems in to office hours.
- Do not procrastinate and keep a regular checking period of the syllabus.
