

Form a group of 3 and turn in one paper per group.

Names _____

1. First, each group member shares one idea from the readings on *Do We Have a Population Problem?* that you disagreed with an author on—explain the idea to your group members and explain what you think (and why).

2. Stuart Pugh (1929-1993), a professor of design at Strathclyde University in Glasgow, Scotland is known for creating the decision matrix method that is used to weigh (and help decide on) multi-dimensional options. Originally used in engineering, it is a popular method in diverse fields, including economics, mathematics and financial investment analysis.

As a group, create one Decision Matrix - with one item in each spot. Your items may contain information from the readings or ideas your group has.

Best Case Scenario

Worst Case Scenario

We stabilize population:

We increase the population:

We decrease the population:
