

Names _____

1. First, each group member shares an idea or topic which relates to these readings on *Should Genetically Engineered Mosquitoes Be Released into the Environment to Fight Disease?* that you wish to share and/or discuss.

2. Stuart Pugh (1929-1993), a professor of design at Strathclyde University in Glasgow, Scotland is known for creating the decision matrix method that is used to weigh (and help decide on) multi-dimensional options. Originally used in engineering, it is a popular method in diverse fields, including economics, mathematics and financial investment analysis.

As a group, create one Decision Matrix - with **one item** in each spot. Your items may contain information from the readings or ideas your group has.

Best Case Scenario

Worst Case Scenario

We do not release genetically engineered mosquitoes:

We release genetically engineered mosquitoes in controlled settings like on an island:

We release genetically engineered mosquitoes broadly:
